PROFESSIONAL SUMMARY:

JAVA Developer with 3 years of experience in designing, developing, and supporting enterprise-scale Java applications. Strong expertise in Java (8–17), **Spring Boot**, and **microservices architecture**, with hands-on experience in **REST API development**, distributed systems, and **search platforms**. Proven ability in production support, bug fixing, code migration, and **CI/CD pipeline management**. Skilled in test-driven development, **code quality improvements**, and cross-functional **Agile collaboration** to deliver scalable and reliable backend solutions. Experienced in AI-assisted development using GitHub Copilot, Claude to accelerate software development, debugging, and code quality improvements.

TECHNICAL SKILLS:

Backend Development: Java, Spring Boot, Microservices, REST API

Database Management: MySQL, MarkLogic, Solr

Testing and Monitoring: Postman, SonarQube, Splunk, Argo CD, Application Debugging

Cloud & DevOps: Jenkins (CI/CD Pipelines), Git, AWS Cloud Practitioner

Gen AI Tools: GitHub Copilot, Claude

WORK EXPERIENCE:

Cognizant Technology Solutions | Software Engineer | Sept 2023 – Present

Project: Client: Lexis Nexis-RELX Group

Key Responsibilities:

- Resolved 20+ critical production bugs, improving system performance and reducing error rates by ~35%, while ensuring accessibility. Conducted root cause analysis and implemented long-term fixes across multiple services to enhance application stability.
- Successfully migrated the codebase from Java 8 to Java 17, enabling modern language features (records, switch expressions, sealed classes), improving developer productivity and system maintainability.
- Transitioned build pipeline from Maven to Gradle, achieving ~30% faster build times and simplifying dependency management in a CI/CD environment.
- Contributed to migration efforts from MarkLogic to Solr, enhancing structured document indexing and search capabilities for large-scale legal data.
- Managed and validated Jenkins deployments across dev, cert, and prod environments, ensuring zero-downtime releases and enhancing deployment reliability.
- Collaborated with Agile/Kanban teams in bi-weekly sprints, delivering high-quality, test-covered code on time.
- Followed TDD and code review best practices, achieving 80%+ unit test coverage across key modules.
- Worked in Agile environment, contributing to velocity tracking and sprint deliverables
- Led AMI refreshes and developed an automation system, saving ~10 hours/month of manual effort.
- Improved application security by eliminating legacy dependencies and remediate vulnerabilities using Dependency-Track, earning client recognition.

Cognizant Technology Solutions | Internship | Mar 2023 – Jul 2023

- During my 5-month internship at Cognizant, I gained extensive experience in Java, Advanced Java, Spring Boot, JPA, and REST API development and React Js. I implemented REST endpoints to enable effective communication between the front end and back end. Additionally, I incorporated Spring Security for robust authentication and authorization and utilized Spring Data JPA to facilitate seamless interaction with a MySQL database while adhering to principles of Functional Programming.

PROJECTS:

LA Playbook:

Developed an internal knowledge management platform that centralized onboarding materials, project documentation, audit references, training sessions, and knowledge-transfer resources for LexisNexis offshore teams.

- Designed and developed backend services using Java and Spring Boot to manage project and organizational content.
- Built REST APIs to enable seamless access to onboarding and knowledge-sharing resources.
- Integrated secure authentication mechanisms to control access to project documentation.

Configuration Management Audit Tool:

Developed a web-based application to manage employee technical skills, certifications, expertise levels, and audit-related information across project teams.

- Built backend services using Java and Spring Boot to store and manage employee competency data.
- Implemented role-based workflows enabling managers to monitor team skill distribution and certification progress.
- Developed APIs for profile updates, certification tracking, and audit reporting.

Audit Score Calculator:

Automated monthly audit score calculations by developing the application completely using GitHub Copilot; created interactive dashboards for metrics visualization, improving reporting accuracy and efficiency.

Blood Bank Management System (Internship):

Developed a full-stack web application to manage blood donor information, blood inventory, and blood request workflows across blood banks.

- Designed and implemented RESTful APIs using Spring Boot for donor registration, inventory management, and request processing and responsive user interfaces using ReactJS.
- Implemented authentication and authorization using Spring Security.
- Integrated MySQL database for efficient storage and retrieval of donor and inventory records.

EDUCATION:

- Bachelor of Technology in Computer Science | G Pulla Reddy Engineering College | 2019-2023

CERTIFICATION:

- [AWS Certified Cloud Practitioner \(CLF-C02\)](#) – Certified in foundational cloud concepts and AWS services.
- [GitHub Copilot Certification](#) – Advanced proficiency in utilizing GitHub Copilot and prompt engineering.
- [Generative AI \(AWS\)](#) – Completed GEN AI for Executives certification, gaining expertise in Generative AI technologies.
- [Claude Certified Architect – Foundations Certification](#) – Certified in Claude usage and guidelines

ACHIEVEMENTS:

- **Best GENC (RELX H1'25 Townhall)** – Recognized for exceptional technical performance, quick learning, and significant contributions to team initiatives during the H1 2025 townhall event.
- **Client Appreciation** – Received recognition for eliminating legacy dependencies, resolving vulnerabilities using Dependency-Track, and improving security by removing vulnerabilities from weekly reports.
- [ADM Star Award – Expert Trailblazer](#) – GEN AI certification and demonstrated expertise in AI technologies.
